Notice of New Water Main Installation for Cochise Drive

On Monday, May 6, 2013, The Village of Indian Head Park Water Department will begin a new water main installation project for residents served along portions of Cochise Drive. The project will start at the intersection of Pontiac Drive and Cochise and continue west and then south for approximately 1900' ending at the west end of Osceola and Cochise Drive. Construction activities will include excavation, hauling of stone and dirt along with delivery of pipeline materials. Please note Cochise Drive will be subjected to temporary road closures while doing this work. The specifications for the project require the Contractor to keep inconvenience to adjacent property owners to a minimum; however, some inconvenience is inevitable, such as noise, dust and restricted traffic movement and driveway access. We apologize for any inconvenience while we perform this work and appreciate your patience during the construction process.

Additionally, temporary water shut-offs will occur when we connect our new water main into our existing and again later when we connect your existing house service line to the new water main. We anticipate the temporary shut-offs to last from 3 to 6 hours while we perform the necessary connection work. We suggest storing some water prior to the scheduled interruption of water service. Once reconnected allow the lines to be flushed for several minutes to allow the air to escape and the water to clear.

Our contractor for this water main project is Uno Construction Company, Inc., 6037 Brookbank Road, Downers Grove, Illinois. Uno Construction Co., Inc. can be reached at 1-630-810-5740.

Supervision of construction will be performed by the Village of Indian Head Park Water Department, Edward R. Santen, Jr., and can be reached at 708-246-1233 extension #1 or the Village Offices at (708) 246-3137. We anticipate the water main project to be completed by July 12, 2013 including all pavement restoration and landscaping work weather permitted.

Parents are cautioned to keep children and pets away from the construction areas to avoid accidents; equipment near the work zone sometimes attracts the interest of the children and they should be warned of these hazards. Alternate travel routes for pedestrians and motorists are recommended to stay away from the work zone area.

Thank You,

Edward R. Santen, Jr.

Director of Public Works and Water
